TINTA HILL

Polymetallic vein
Au-Ag-Cu-Pb-Zn

TRIUMPHGOLDCORP.COM

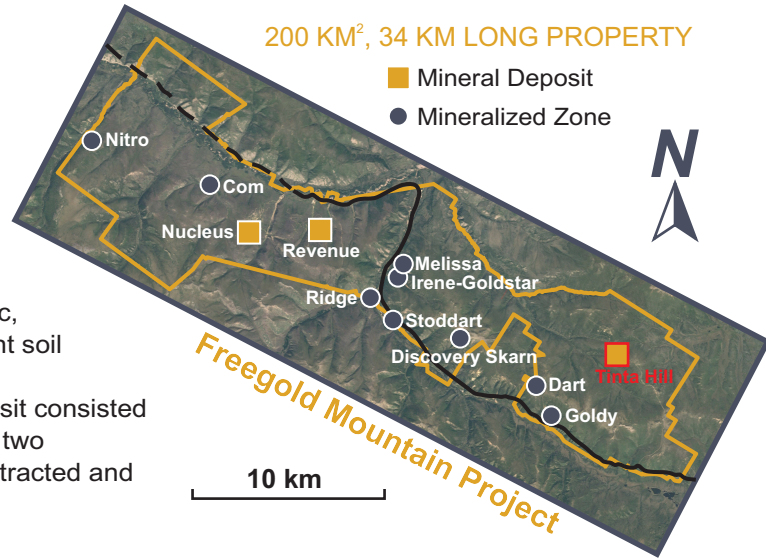

TSX-V: TIG | OTC: TIGCF | FRA: 8N61

INTRODUCTION

Tinta Hill is a polymetallic-vein deposit. The deposit is hosted by Jurassic-aged felsic intrusions (granodiorite to quartz monzonite). Mineralization consists of northwest-trending, subvertical quartz±carbonate-sulphide veins containing pyrite, chalcopyrite, galena, sphalerite, and argentiferous (silver-rich) tetrahedrite. The Tinta veins are mapped discontinuously for over 3.5 km strike-length. The veins vary in width from 0.9 to 1.6 metres.

The Tinta Hill deposit lies within a >1 km wide gold, silver, lead, zinc, cobalt, bismuth, antimony (Au, Ag, Pb, Zn, Co, Bi, Sb) multi-element soil geochemical anomaly.

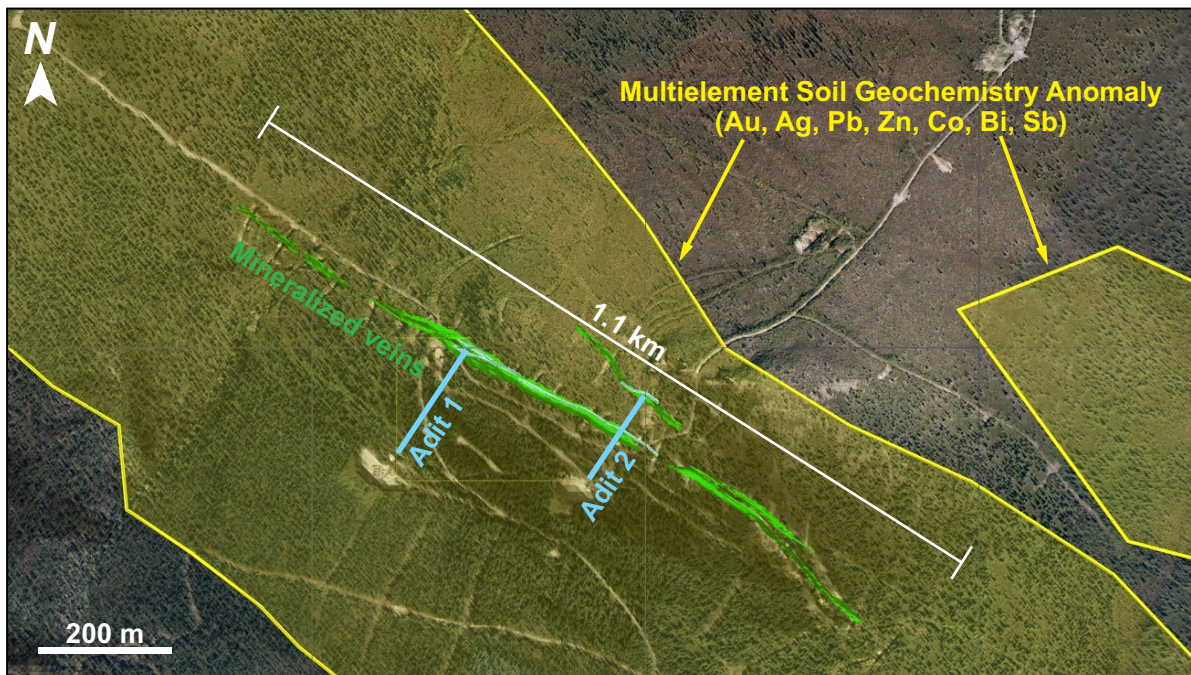

Underground development in 1981 and 1982 on the Tinta Hill deposit consisted of over 2,800 m of development (crosscut and drifting) intersecting two mineralized veins. Approximately 25,000 tonnes of material was extracted and stockpile outside of the two portals (non NI 43-101 compliant).

2020 RESOURCE ESTIMATION (INFERRED)

	Average Grade							Contained Metal					
	Tonnes (million)	AuEq (g/t)	Au (g/t)	Cu (%)	Ag (g/t)	Pb (%)	Zn (%)	AuEq (koz)	Au (koz)	Cu (Mlbs)	Ag (koz)	Pb (Mlbs)	Zn (Mlbs)
Pit Constrained	0.91	3.01	1.09	0.18	42.5	0.72	1.47	88	32	4	1240	14	29
Underground	1.31	3.13	1.43	0.16	46.3	0.56	1.17	132	60	5	1955	16	34
Combined	2.22	3.08	1.29	0.17	44.7	0.63	1.29	220	92	9	3195	30	63

Mineral Resource Estimates are current as of February 11, 2020 and were generated by Robert Sim (P.Geo) of SIM Geological Inc, an independent qualified person. Gold Equivalent (AuEq) is calculated based on prices of \$1,500/oz Au, \$18/oz Ag, \$3.00/lb Cu, \$1.00/lb Pb and \$1.25/lb Zn. 0.35 g/t AuEq Open Pit cut-off and 1.8 g/t AuEq underground cut-off.

Tinta underground development (1980-1981)

- Adit 1: 6300 ft of crosscut
1066 ft of drifting
- Adit 2: 722 ft of crosscut
665 ft of drifting
9x9 ft tunneling
- 880 samples assayed
- 25 kT stockpile
